Fatal Work Injuries in Oregon – 2014

Fatal work injuries totaled 69 in 2014 for Oregon, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Richard J. Holden noted that while the 2014 count was preliminary, the number of work-related fatalities in Oregon increased by 20 over the year. Fatal occupational injuries in the state have ranged from a high of 88 in 1992 to a low of 43 in 2012. (See [chart 1](#).) Nationwide, a preliminary total of 4,679 fatal work injuries were recorded in 2014, up from a revised count of 4,585 fatalities in 2013, according to results from the Census of Fatal Occupational Injuries (CFOI) program. Final 2014 CFOI data will be released in the late spring of 2016.

Chart 1. Total fatal occupational injuries, Oregon, 2005–14

NOTE: Data for 2014 are preliminary.
SOURCE: U.S. Bureau of Labor Statistics.

Of the 69 fatal work injuries reported in Oregon in 2014, 29 resulted from transportation incidents and 13 from contact with objects and equipment. Together these two major categories accounted for over half of all fatal work injuries reported in the state. Violence and other injuries by persons or animals had the third most fatalities with 12. (See [table 1](#).) Other major event categories each reported 10 or fewer deaths. Within transportation incidents, roadway incidents involving motorized land vehicles was the most frequent type of

workplace fatality with 15 deaths. This category accounted for nearly one-quarter of all on-the-job fatalities in the state. In the contact with objects and equipment category, 9 of the 13 deaths occurred as a result of being struck by an object or equipment. (Note that transportation counts presented in this release are expected to rise when updated 2014 data are released in the late spring of 2016 because key source documentation detailing specific transportation-related incidents has not yet been received.)

In the United States, transportation incidents were also the most frequent fatal workplace event in 2014, accounting for 40 percent of fatal work injuries. In Oregon, transportation incidents accounted for 42 percent of the state's share of fatalities. (See [chart 2](#).) Falls, slips, or trips was the second most frequent type of event nationally, with 17 percent of work-related fatalities; the share in Oregon was 14 percent. Contact with objects or equipment and violence and other injuries by persons or animals each accounted for about 16 percent of the nation's workplace fatalities, while in the state, these events were responsible for 19 and 17 percent of workplace fatalities, respectively.

Chart 2. Fatal occupational injuries by selected event, Oregon and the United States, 2014

Additional highlights:

- The agriculture, forestry, fishing and hunting industry had the largest number of fatalities in the state with 19, compared to 10 the previous year. Transportation incidents accounted for eight fatal work injuries in this industry and contact with objects and equipment accounted for seven fatalities. (See [table 2](#).)
- Transportation and warehousing had the second highest fatality count with 13, followed by construction and government with 6 worker deaths each. Transportation incidents accounted for the largest number deaths in each of these industries.
- Transportation and material moving occupations had the highest number of fatal work injuries with 16.

Extraction workers suffered 14 fatalities followed by heavy tractor trailer and truck drivers with 7 fatalities. (See [table 3.](#))

- Men accounted for 60, or 87 percent, of the work-related fatalities in the state. (See [table 4.](#)) Transportation incidents made up 43 percent of these fatalities.
- In Oregon, 84 percent of those who died from a workplace injury were white non-Hispanics. Nationwide, this group accounted for 68 percent of work-related deaths.
- Workers 25-54 years old—the prime working age group—accounted for 38, or 55 percent of the state’s work-related fatalities in 2014. Nationally, workers in this group accounted for 58 percent of on-the-job fatalities.
- Of the 69 fatal work injuries in Oregon, 75 percent worked for wages and salaries; the remainder were self-employed. The most frequent fatal event for wage and salary workers was transportation incidents. For the self-employed, falls, slips, or trips was the most frequent fatal event.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries, part of the BLS occupational safety and health statistics program, compiles a count of all fatal work injuries occurring in the United States during the calendar year. The program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This assures counts are as complete and accurate as possible.

For technical information about the CFOI program, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/pdf/homch9.pdf.

Federal/State agency coverage. The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or state agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

Acknowledgments. The Bureau of Labor Statistics appreciates the efforts of all federal, state, local, and private sector entities that submitted source documents used to identify fatal work injuries.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
